

ANGIE PBX

Get a Sleek, Reliable PBX Solution at a Lower Price While Meeting Safety Standards.

Most hotel phones sit and collect dust with guests using their own mobile devices to make calls. Many were installed years ago, and hoteliers are dealing with high maintenance costs of antiquated phones and phone systems that need to be replaced in the near future.

Despite decreased guest usage of in-room phones, hotels must still comply with Kari's Law in the U.S. and Telecom Decision CRTC 2007-44 in Canada. They need to offer reliable emergency calling options with high sound quality and location information to ensure guest safety in each hotel room.

Angie Hospitality® by Nomadix offers a reliable, private branch exchange (PBX) cloud service at a fraction of the price of traditional PBX solutions and is fully compatible with all U.S. and Canadian emergency requirements. Hoteliers can set up the Angie guest room assistant as the in-room phone, offering voice-activated or touchscreen-enabled emergency dialing, or for guest calls throughout the hotel. The front desk and administrative locations can use traditional IP phones to connect with guest rooms, other departments and emergency services as needed.

It's time to ditch traditional phones. Making the switch to Angie simultaneously upgrades outdated equipment while saving the hotel money each month. Only pay for what you need and what guests actually use. As an added bonus, Angie devices also provide all the capabilities of a digital guest room assistant, in addition to the calling features.

HOW IT WORKS

The cloud-managed Angie PBX service provides telephony capabilities with clear HD voice technology for guest rooms and front desk and administrative locations in the hotel.

Angie guest room assistant devices and administrative IP phones are easy to configure to get the service up and running. By eliminating servers and other equipment on site, the set-up process is simple and quick. If a property is migrating to Angie PBX, existing numbers can be rolled over to the new service.

In addition to the PBX features, Angie digital assistants provide functionality to help fulfill guest requests, answer questions about the hotel and nearby attractions, and provide a seamless, next-generation hotel experience. Angie devices can also be integrated with existing hotel systems to provide a touchless interface to control the thermostat, lights, TV and more. Angie eliminates many touchpoints for hotel staff to increase safety precautions and provide more efficiency.

For hotels that still want to offer traditional phones in each room, IP phones are available. Angie PBX is also compatible with most SIP/IP phones on the market.

FEATURES & BENEFITS

Cloud-based PBX solution with monthly fee structure is a cost-effective replacement for legacy analog solutions that are increasingly expensive to support.

All current E911 standards for the U.S., including the newest 'Dispatchable Locations' requirement by the FCC, and Telecom Decision CRTC 2007-44 requirements in Canada are supported.

Offers voice or touchscreen navigation options for guests.

Comprehensive administrative and front desk capabilities include voicemail, call forwarding, emergency-calling notification and conference calling.

Angie devices offer in-room assistant functionality, including guest requests, touchless controls, hotel information and connections to other devices in the room.

Standard hospitality features such as internal calls, voicemail, room-to-room calls and more are provided.

AVAILABILITY

The Angie PBX service is generally available in the U.S. and Canada. Angie digital in-room assistants are available globally.
